Spectral Changes in Forest Vegetation

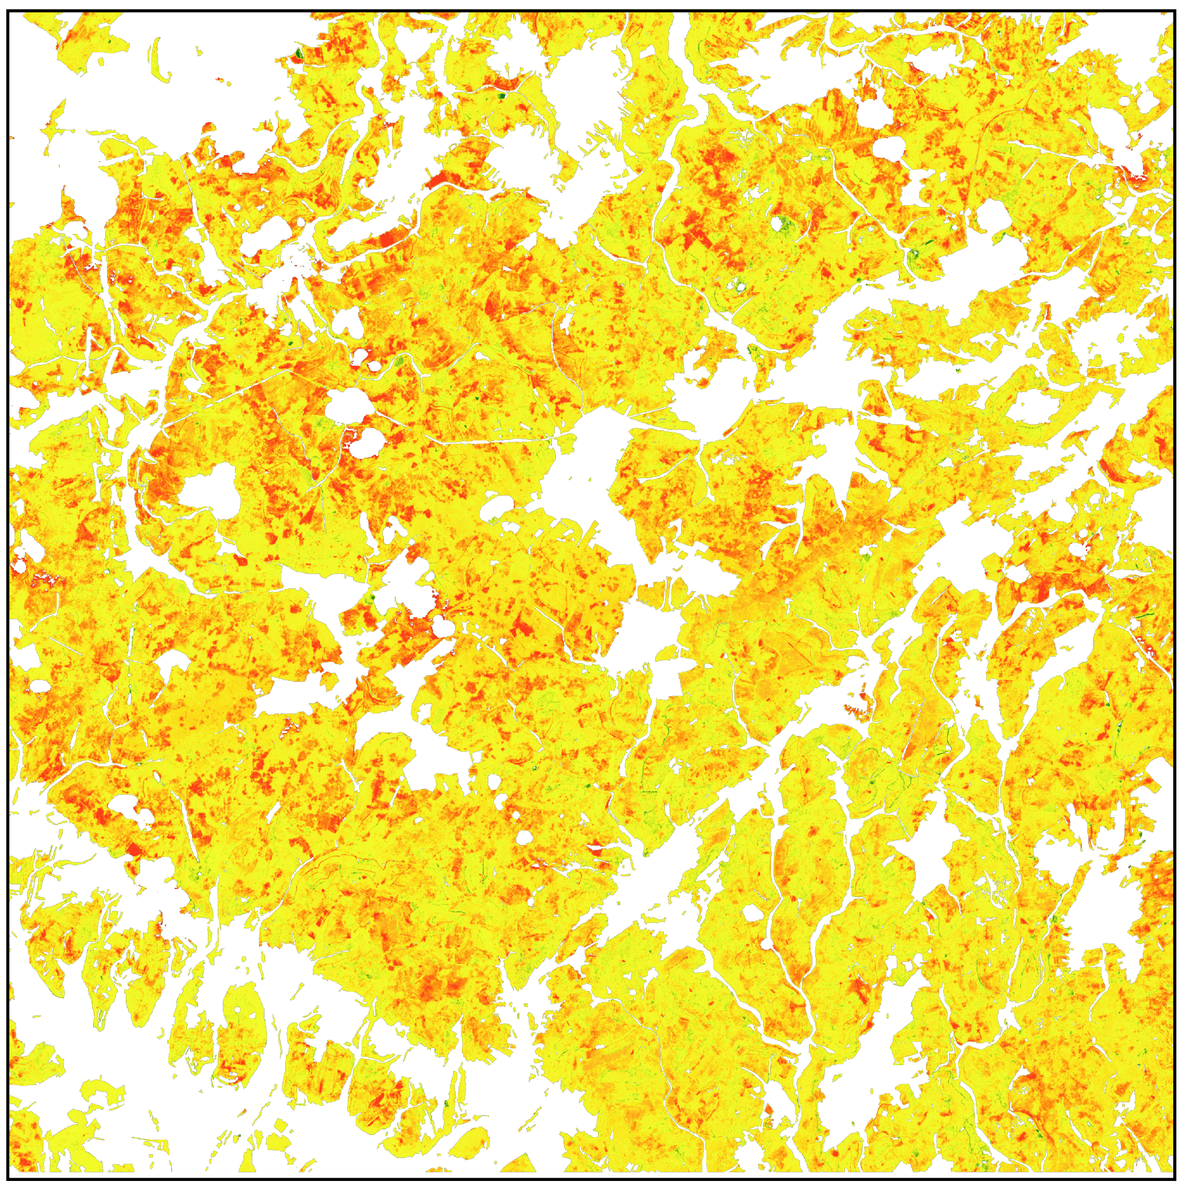

Southern Thuringian Forest, Germany | 1 July 2018 – 9 July 2024

ΔNDVI - vegetation greenness

ΔNDMI - vegetation moisture

ΔNBR - canopy change

N

0 10 20 km

Change in spectral index (2024 – 2018)

-0,5 0,5

Data: Copernicus Sentinel-2 Level-2A (2018, 2024); Thünen Institute forest mask (2018)
Method: Spectral index differencing using surface reflectance; forest areas masked to 2018 extent
Map & analysis: Alexander Maier
Projection: WGS 84 / UTM zone 32N (EPSG:32632)
Spatial resolution: 10 m
